HomeCEU

ScaleArc proves to be the best therapy for HomeCEU.

Business Challenge

HomeCEU provides online courses and professional training for healthcare professionals online. They maintain a Learning Management System (LMS) that is home to courses for B2B and B2C customers where users can search for courses based on region, license type and duration.

With HomeCEU growing at an unanticipated rate, the business needed a reliable and quick way to serve course information to their customers without any delays or downtime.

Solution

We spoke with HomeCEU's Senior Software Engineer, Carlos Copto, who explained how their technical team knew that the sudden growth they were experiencing would impact the speed at which their databases were performing and serving course content. To avoid degradation in service, early signs of which had been observed in how the DB was reading, the HomeCEU team made the decision to use ScaleArc.

The solution was selected for its core caching ability which dramatically helped improve the speed and availability of their database.

"After we got ScaleArc and started using AWS, our ability to load balance became very good. It became better than it had ever been."

Carlos went on to explain how not too long ago they had a senior developer working on the application to get requirements from stakeholders, while an infrastructure engineer helped ensure all systems and services were kept online. As the business grew, this type of application and Infrastructure management was no longer sustainable and the need for managed services began to surface. Coupled with the increased number of courses and registered users, the HomeCEU LMS application slowed down significantly and brought to light the need for high availability, scalability, and speed.

The technical team at HomeCEU reviewed and tested several solutions but found ScaleArc to offer the best experience.

“We initially used proxy SQL for a little while for load balancing as at the time ScaleArc did not have the feature. We tried the solution for a short while but the caching really wasn’t very good.”

ScaleArc, with fewer resources, was able to deliver superior performance over competing solutions.

For HomeCEU, cost was not a deciding factor when selecting ScaleArc as a solution. Their priority was to provide users with the best performance and customer experience possible.

“ScaleArc was performing better with one server compared to proxy SQL that was running on multiple servers”

Carlos Copto

Senior Software Engineer
HomeCEU

Benefits

- Improved Performance**
ScaleArc allows for the HomeCEU LMS application to deliver service without experiencing any degradation in performance.
- Scalability**
With ScaleArc, HomeCEU is able to add courses and support more users.

About DevGraph

The DevGraph family of products was developed by DevFactory. DevFactory was founded in 2008. The company’s solution suite enables developers to reduce, outsource or automate things that cause undifferentiated heavy lifting to focus on building great software. DevFactory has taken IT software services out of the dark ages of custom scripts and manual processes to today’s NoOps, low code, highly automated paradigm – yet delivering fundamentally higher-quality products.

Products

-  DEVSPACES
-  ENGINE YARD
-  FOGBUGZ
-  CODEREVIEW
-  DEVCOACH
-  CODEFIX
